Martin P. Klein Executive Vice President and Chief Financial Officer

ATHENE HOLDING LTD. REPORTS THIRD QUARTER 2019 RESULTS

PEMBROKE, Bermuda – November 5, 2019 – Athene Holding Ltd. ("Athene") (NYSE: ATH), a leading provider of retirement savings products, announced financial results for the third quarter 2019.

Net income available to AHL common shareholders for the third quarter 2019 was \$276 million, or \$1.50 per diluted Class A common share ("diluted share"), compared to net income available to AHL common shareholders for the third quarter 2018 of \$623 million, or \$3.15 per diluted common share. The decrease from the prior year quarter was primarily driven by an unfavorable change in the value of FIA embedded derivatives, due to the impact of unfavorable unlocking from the annual actuarial assumption review, less favorable equity market performance, and an unfavorable change in discount rates. The decrease was also driven by lower adjusted operating income.

Adjusted operating income available to common shareholders¹ for the third quarter 2019 was \$243 million, or \$1.34 per adjusted operating common share, compared to adjusted operating income available to common shareholders for the third quarter 2018 of \$371 million, or \$1.90 per adjusted operating common share. The decrease from the prior year quarter was primarily driven by an increase in cost of funds due to continued growth in the business including institutional products, as well as unfavorable equity market and adverse unlocking impacts.

Highlights

- Book value per common share of \$74.20, an increase of 11% and 63% for the quarter-over-quarter and year-over-year periods ended September 30, 2019, respectively
- Adjusted book value per common share of \$50.74, an increase of 3% and 11% for the quarter-over-quarter and year-over-year periods ended September 30, 2019, respectively
- ROE of 8.5%, Consolidated adjusted operating ROE of 10.6%, and Retirement Services adjusted operating ROE of 13.5% for the quarter ended September 30, 2019
- ROA of 0.78% and adjusted operating ROA of 0.82% for the quarter ended September 30, 2019
- Total deposits of \$5.6 billion underwritten to mid-teens or better returns for the quarter ended September 30, 2019
- Repurchased \$927 million of common stock from December 2018 through October 2019, including \$121 million in the third quarter and an additional \$283 million through November 5, 2019
- On October 28, 2019, Athene announced a transaction with its longstanding partner, Apollo Global Management, to strengthen the relationship and increase strategic alignment between the two companies. Per the terms of the transaction, Apollo will concede its super-voting rights to eliminate Athene's multi-class share structure and Apollo will buy an incremental 18% stake in Athene at a premium in exchange for a 7% equity stake in Apollo as well as cash consideration²
- Athene's Board of Directors increased the share repurchase authorization by \$600 million in connection with the recently announced strategic transaction with Apollo, bringing the total outstanding authorization to \$640 million
- Raised \$345 million of gross proceeds through successful perpetual preferred stock offering in September 2019, at an attractive cost of capital of 5.625%
- Through October 2019, Apollo/Athene Dedicated Investment Program ("ADIP"), the investment fund managed by Apollo that will help fund Athene Co-Invest Reinsurance Affiliate ("ACRA"), has raised \$3 billion of capital commitments
- Estimated ALRe RBC of 420%³ and U.S. RBC of 421% as of September 30, 2019

1 This news release references certain Non-GAAP measures. See Non-GAAP Measures for additional discussion.

2 For further information on the proposed transaction, please refer to the associated press release and investor presentation available on ir.athene.com. 3 ALRe RBC ratio is used in evaluating our capital position and the amount of capital needed to support our Retirement Services segment and is calculated by applying the NAIC RBC factors to the statutory financial statements of ALRe and its non-U.S. reinsurance subsidiary, on an aggregate basis. "In the third quarter we delivered record organic growth underwritten to a blended unlevered return in excess of 20%, which drove our invested assets to new heights exceeding \$120 billion. Athene remains uniquely positioned with a multi-channel distribution model that generates sustainable and opportunistic growth at attractive ROEs," said Jim Belardi, CEO of Athene.

Mr. Belardi continued, "We are executing our business strategy and allocating capital to create value for shareholders. To enhance our operating model, we are focused on building an array of asset sourcing capabilities and the pending transaction with PK AirFinance is supportive of this effort. By sourcing a greater quantity of alpha-generating securities while maintaining underwriting discipline, we will reinforce our competitive advantage of generating attractive levels of net spread and profitability. In addition, we continue to opportunistically repurchase our shares at high-teens returns, repurchasing a total of \$927 million at an average price of less than 90% of adjusted book value per share. With our recent authorization increase of \$600 million, our Board has authorized nearly \$1.6 billion of share repurchases in less than twelve months. Finally, our recently announced strategic transaction with our longstanding partner, Apollo, will eliminate Athene's multi-class share structure, enhance our index inclusion eligibility, and increase the appeal of our stock to a broader set of active and passive investors."

Third Quarter 2019 Results

Net income available to AHL common shareholders for the third quarter 2019 was \$276 million, a decrease of \$347 million, or 56%, from the third quarter 2018. The decrease from the prior year quarter was primarily driven by an unfavorable change in FIA embedded derivatives due to the impact of unlocking, less favorable equity market performance and an unfavorable change in discount rates, as well as lower adjusted operating income.

Adjusted operating income available to common shareholders for the third quarter 2019 was \$243 million, a decrease of \$128 million, or 35%, from the third quarter 2018. The decrease from the prior year quarter was primarily driven by a higher cost of funds reflecting growth in the business including institutional, unfavorable unlocking of \$48 million, as well as less favorable equity market performance.

Unfavorable unlocking for the third quarter 2019 was driven by a reduction in the long-term interest rate assumption, partially offset by a favorable impact from actuarial experience, primarily driven by favorable experience in certain legacy blocks of business.

Adjusted operating income available to common shareholders, excluding notable items, was \$305 million, a decrease of \$43 million, or 12%, from the prior year. The decrease from the prior year quarter was primarily driven by a higher cost of funds reflecting growth in the business including institutional products.

Deposit Highlights

In the third quarter 2019, Athene generated record quarterly organic deposits of \$5.6 billion, an increase of 72% compared to the third quarter 2018, demonstrating the strength of its multi-channel distribution model. Notably, the liabilities supporting these deposits were underwritten to attractive mid-teens or better returns.

Retail: In the third quarter 2019, Athene generated \$1.9 billion of new deposits, unchanged quarter-over-quarter, while decreasing 13% from the prior year quarter, reflecting Athene's disciplined approach to pricing in a declining interest rate environment. Athene continues to expand distribution particularly through financial institutions, and newer products are building momentum.

Flow Reinsurance: In the third quarter 2019, Athene generated \$609 million of new deposits, in line with the prior year quarter though meaningfully lower than the strong activity in the second quarter. The quarter-over-quarter decline was driven by adjustments to quota share levels in response to lower interest rates as Athene maintained pricing discipline.

Institutional: In the third quarter 2019, Athene generated \$3.1 billion of new deposits from institutional products, including \$2.6 billion from the close of the previously announced Bristol-Meyers Squibb pension transaction. Athene also generated \$503 million of new deposits from one funding agreement and one FHLB agreement.

To the extent our Class B common shares and/or any other stock-based awards. We believe this non-GAAP measure is an appropriate economic representation of our share counts for use in an economic view of adjusted operating earnings per common share.

Segment Results

Retirement Services

For the third quarter 2019, adjusted operating income available to common shareholders in Retirement Services was \$256 million, a decrease of \$123 million, or 32%, from the third quarter 2018, resulting in an adjusted operating ROE of 13.5%. The decrease in adjusted operating income available to common shareholders over the prior year quarter was primarily driven by a higher cost of funds due to growth in the block including institutional business, unfavorable equity market impacts and actuarial experience, adverse unlocking, as well as out of period actuarial adjustments.

Excluding notable items, adjusted operating income available to common shareholders in Retirement Services was \$318 million, resulting in an adjusted operating ROE of 16.7%.

The net investment spread, which measures net investment earnings less cost of funds, was 1.13% of average invested assets for the third quarter 2019, a decrease of 65 basis points from the third quarter 2018. The decrease from the prior year quarter was primarily driven by an increase in cost of funds, as well as a decrease in the fixed income and other net investment earned rate (NIER).

The NIER was 4.31% for the third quarter 2019, a decrease of 24 basis points from the prior year quarter, primarily driven by a lower fixed income and other NIER due to lower floating rate income, as well as lower-than-expected RMBS prepayments. The annualized return on alternative investments during the third quarter 2019 was 8.90%, compared to 10.65% in the prior year quarter.

Cost of funds, which is comprised of the total cost of crediting on deferred annuities and institutional products as well as other liability costs, was 3.18% for the third quarter 2019, an increase of 41 basis points from the third quarter 2018. Total cost of crediting was 1.96% for the third quarter 2019, an increase of 10 basis points from the prior year quarter, primarily driven by growth in the institutional business, which carries a higher cost of crediting compared to deferred annuities. Cost of crediting on deferred annuities was 1.98% and the cost of crediting on institutional business was 3.68%. Other liability costs were 1.22% for the third quarter 2019, an increase of 31 basis points from the prior year quarter primarily due to unfavorable equity market impacts and actuarial experience, adverse unlocking, and out of period actuarial adjustments.

Corporate & Other

In the third quarter 2019, the adjusted operating loss available to common shareholders was \$13 million in Corporate & Other, an increase of \$5 million from adjusted operating loss available to common shareholders of \$8 million in the third quarter 2018. The greater operating loss was driven by preferred stock dividends, partially offset by higher alternative net investment earnings and slightly lower operating expenses.

Share Repurchase Activity

From December 2018 through October 2019, Athene repurchased 22.4 million shares of its common stock for \$927 million under previously announced share repurchase programs. During this period, shares were purchased at an average cost of \$41.44 per share and an average price-to-adjusted book value multiple of 0.86x. This activity includes 2.9 million shares repurchased during the third quarter 2019 for \$121 million.

Athene's Board of Directors previously increased the share repurchase authorization by \$600 million in connection with the strategic transaction announced with Apollo on October 28th, 2019. As of November 5, 2019, outstanding share repurchase capacity totaled \$640 million.

Update on Strategic Capital Solution (ACRA)

In May 2019, Athene announced the formation of a strategic capital solution called Athene Co-Invest Reinsurance Affiliate ("ACRA"). This shareholder-friendly, strategic capital solution will allow Athene the flexibility to simultaneously deploy capital across multiple accretive avenues, while maintaining a strong balance sheet position. With this solution, Athene will be able to achieve various business objectives in a manner that is accretive to shareholders, minimizes the potential need for additional primary issuances in the future, and eliminates the impact undeployed on-balance sheet capital has on key financial measures, such as ROE. To date, capital commitments raised for Apollo/Athene Dedicated Investment Program ("ADIP"), the investment fund managed by Apollo Global Management that will help capitalize ACRA, are at \$3 billion, and additional commitments are expected to close around year end 2019. Additional information on ACRA and ADIP can be found in a presentation previously posted on Athene's website at ir.athene.com.

Conference Call Information

Athene will host a conference call today, Tuesday, November 5, 2019, at 10 a.m. ET. During the call, members of Athene's senior management team will review Athene's financial results for the third quarter ended September 30, 2019. This press release, the third quarter 2019 earnings presentation and financial supplement are posted to Athene's website at ir.athene.com.

- Live conference call: Toll-free at (866) 901-0811 (domestic) or +1 (346) 354-0810 (international)
- Conference call replay available through November 21, 2019 at (800) 585-8367 (domestic) or +1 (404) 537-3406 (international)
- Conference ID number: 5787514

About Athene Holding Ltd.

Athene, through its subsidiaries, is a leading retirement services company that issues, reinsures and acquires retirement savings products designed for the increasing number of individuals and institutions seeking to fund retirement needs. The products offered by Athene include:

- · Retail fixed, fixed indexed and index-linked annuity products;
- · Reinsurance arrangements with third-party annuity providers; and
- Institutional products, such as funding agreements and group annuity contracts related to pension risk transfers.

Athene had total assets of \$144.2 billion as of September 30, 2019. Athene's principal subsidiaries include Athene Annuity & Life Assurance Company, a Delaware-domiciled insurance company, Athene Annuity and Life Company, an Iowa-domiciled insurance company, Athene Annuity & Life Assurance Company of New York, a New York-domiciled insurance company and Athene Life Re Ltd., a Bermuda-domiciled reinsurer.

Further information about our companies can be found at athene.com.

Non-GAAP Measures

In addition to our results presented in accordance with GAAP, we present certain financial information that includes non-GAAP measures. Management believes the use of these non-GAAP measures, together with the relevant GAAP measures, provides information that may enhance an investor's understanding of our results of operations and the underlying profitability drivers of our business. The majority of these non-GAAP measures are intended to remove from the results of operations the impact of market volatility (other than with respect to alternative investments) as well as integration, restructuring and certain other expenses which are not part of our underlying profitability drivers, as such items fluctuate from period to period in a manner inconsistent with these drivers. These measures should be considered supplementary to our results in accordance with GAAP and should not be viewed as a substitute for the corresponding GAAP measures. See *Non-GAAP Measure Reconciliations* for the appropriate reconciliations to the corresponding GAAP measures.

Adjusted operating income available to common shareholders is a non-GAAP measure used to evaluate our financial performance excluding market volatility and expenses related to integration, restructuring, stock compensation and other expenses. Our adjusted operating income available to common shareholders equals net income available to AHL common shareholders adjusted to eliminate the impact of the following (collectively, the "non-operating adjustments"):

- Investment Gains (Losses), Net of Offsets
- · Change in Fair Values of Derivatives and Embedded Derivatives FIAs, Net of Offsets
- Integration, Restructuring and Other Non-Operating Expenses
- Stock Compensation Expense
- Bargain Purchase Gain
- Income Tax (Expense) Benefit Non-Operating

We consider these non-operating adjustments to be meaningful adjustments to net income available to AHL common shareholders for the reasons discussed in greater detail above. Accordingly, we believe using a measure which excludes the impact of these items is useful in analyzing our business performance and the trends in our results of operations. Together with net income available to AHL common shareholders, we believe adjusted operating income available to common shareholders provides a meaningful financial metric that helps investors understand our underlying results and profitability. Adjusted operating income available to common shareholders should not be used as a substitute for net income available to AHL common shareholders.

Adjusted operating ROA is a non-GAAP measure used to evaluate our financial performance and profitability. Adjusted operating ROA is computed using our adjusted operating income available to common shareholders divided by average invested assets for the relevant period. To enhance the ability to analyze these measures across periods, interim periods are annualized. While we believe each of these metrics are meaningful financial metrics and enhance our understanding of the underlying profitability drivers of our business, they should not be used as a substitute for ROA presented under GAAP.

Adjusted operating ROE is a non-GAAP measure used to evaluate our financial performance excluding the impacts of AOCI and the cumulative change in fair value of funds withheld and modco reinsurance assets, in each case net of DAC, DSI, rider reserve and tax offsets. Adjusted common shareholders' equity is calculated as the ending shareholders' equity excluding AOCI, the cumulative change in fair value of funds withheld and modco reinsurance assets and preferred stock. Adjusted operating ROE is calculated as the adjusted operating income available to common shareholders, divided by average adjusted common shareholders' equity. These adjustments fluctuate period to period in a manner inconsistent with our underlying profitability drivers as the majority of such fluctuation is related to the market volatility of the unrealized gains and losses associated with our AFS securities. Except with respect to reinvestment activity relating to acquired blocks of businesses, we typically buy and hold AFS investments to maturity throughout the duration of market fluctuations, therefore, the period-over-period impacts in unrealized gains and losses are not necessarily indicative of current operating fundamentals or future performance. Accordingly, we believe using measures which exclude AOCI and the cumulative change in fair value of funds withheld and modco reinsurance assets are useful in analyzing trends in our operating results. To enhance the ability to analyze these measures across periods, interim periods are annualized. Adjusted operating ROE should not be used as a substitute for ROE. However, we believe the adjustments to equity are significant to gaining an understanding of our overall financial performance.

Adjusted operating earnings per common share, weighted average common shares outstanding – adjusted operating and adjusted book value per common share are non-GAAP measures used to evaluate our financial performance and financial condition. The non-GAAP measures adjust the number of shares included in the corresponding GAAP measures to reflect the conversion or settlement of all shares and other stock-based awards outstanding. We believe using these measures represents an economic view of our share counts and provides a simplified and consistent view of our outstanding shares. Adjusted operating earnings per common share is calculated as the adjusted operating income available to common shareholders, over the weighted average common shares outstanding – adjusted operating. Adjusted book value per common share is calculated as the adjusted common share soutstanding. Our Class B common shares are economically equivalent to Class A common shares and can be converted to Class A common shares on a one-for-one basis at any time. Our Class M common shares are in the legal form of shares but economically function as options as they are convertible into Class A shares after vesting and payment of the conversion price. In calculating Class A diluted earnings per share on a GAAP basis, we are required to apply sequencing rules to determine the dilutive impacts, if any, of our Class B common shares, Class M common shares and any other stock-based awards. To the extent our Class B

common shares, Class M common shares and/or any other stock-based awards are not dilutive, after considering the dilutive effects of the more dilutive securities in the sequence, they are excluded. Weighted average common shares outstanding – adjusted operating and adjusted operating common shares outstanding assume conversion or settlement of all outstanding items that are able to be converted to or settled in Class A common shares, including the impacts of Class B common shares on a one-for-one basis, the impacts of all Class M common shares net of the conversion price and any other stock-based awards, but excluding any awards for which the exercise or conversion price exceeds the market value of our Class A common shares on the applicable measurement date. For certain historical periods, Class M shares were not included due to issuance restrictions which were contingent upon our IPO. Adjusted operating earnings per common share, weighted average common shares outstanding – adjusted operating and adjusted book value per common share should not be used as a substitute for basic earnings per share – Class A common shares, basic weighted average common shares outstanding – Class A or book value per common share. However, we believe the adjustments to the shares and equity are significant to gaining an understanding of our overall results of operations and financial condition.

Adjusted debt to capital ratio is a non-GAAP measure used to evaluate our capital structure excluding the impacts of AOCI and the cumulative change in fair value of funds withheld and modco reinsurance assets, net of DAC, DSI, rider reserve and tax offsets. Adjusted debt to capital ratio is calculated as total debt excluding consolidated variable interest entities (VIEs) divided by adjusted shareholders' equity. Adjusted debt to capital ratio should not be used as a substitute for the debt to capital ratio. However, we believe the adjustments to total debt and shareholders' equity are significant to gaining an understanding of our capitalization, debt utilization and debt capacity.

Net investment spread is a key measurement of the financial health of our Retirement Services profitability. Net investment spread measures our investment performance less the total cost of our liabilities. Net investment earned rate is a key measure of our investment performance, while cost of funds is a key measure of the cost of our policyholder benefits and liabilities. Investment margin on our deferred annuities measures our investment performance less the cost of crediting for our deferred annuities, which make up a significant portion of our reserve liabilities.

- Net investment earned rate is a non-GAAP measure we use to evaluate the performance of our invested assets that does not correspond to GAAP net investment income. Net investment earned rate is computed as the income from our invested assets divided by the average invested assets for the relevant period. To enhance the ability to analyze these measures across periods, interim periods are annualized. The adjustments to arrive at our net investment earned rate add alternative investment gains and losses, gains and losses related to trading securities for CLOs, net VIE impacts (revenues, expenses and noncontrolling interest) and the change in fair value of reinsurance assets. We include the income and assets supporting our change in fair value of reinsurance assets by evaluating the underlying investments of the funds withheld at interest receivables and we include the net investment income from those underlying investments which does not correspond to the GAAP presentation of change in fair value of reinsurance assets. We exclude the income and assets supporting business that we have exited through ceded reinsurance including funds withheld agreements. We believe the adjustments for reinsurance provide a net investment earned rate on the assets for which we have economic exposure.
 Cost of funds includes liability costs related to cost of crediting on both deferred annuities and institutional products as well as other liability costs. Cost
- of funds includes liability costs related to cost of crediting on both deferred annulties and institutional products as well as other liability costs. Cost of funds is computed as the total liability costs divided by the average invested assets for the relevant period. To enhance the ability to analyze these measures across periods, interim periods are annualized.
 - Cost of crediting includes the costs for both deferred annuities and institutional products. Cost of crediting on deferred annuities is the interest credited to the policyholders on our fixed strategies as well as the option costs on the indexed annuity strategies. With respect to FIAs, the cost of providing index credits includes the expenses incurred to fund the annual index credits, and where applicable, minimum guaranteed interest credited. Cost of crediting on institutional products is comprised of PRT costs including interest credited, benefit payments and other reserve changes, net of premiums received when issued, as well as funding agreement costs including the interest payments and other reserve changes. Cost of crediting is computed as the cost of crediting for deferred annuities and institutional products divided by the average invested assets for the relevant periods. Cost of crediting on deferred annuities is computed as the interest credited on fixed strategies and option costs on indexed annuity strategies divided by the average account value of our deferred annuities. Cost of crediting on institutional products is computed as the PRT and funding agreement costs divided by the average institutional reserve liabilities. Our average invested assets, account values

and institutional reserve liabilities are averaged over the number of quarters in the relevant period to obtain our associated cost of crediting for such period. To enhance the ability to analyze these measures across periods, interim periods are annualized.

 Other liability costs include DAC, DSI and VOBA amortization, change in rider reserves, the cost of liabilities on products other than deferred annuities and institutional products, excise taxes, premiums, product charges and other revenues. We believe a measure like other liability costs is useful in analyzing the trends of our core business operations and profitability. While we believe other liability costs is a meaningful financial metric and enhances our understanding of the underlying profitability drivers of our business, it should not be used as a substitute for total benefits and expenses presented under GAAP.

Net investment earned rate, cost of funds, net investment spread and investment margin on deferred annuities are non-GAAP measures we use to evaluate the profitability of our business. We believe these metrics are useful in analyzing the trends of our business operations, profitability and pricing discipline. While we believe each of these metrics are meaningful financial metrics and enhance our understanding of the underlying profitability drivers of our business, they should not be used as a substitute for net investment income, interest sensitive contract benefits or total benefits and expenses presented under GAAP.

Operating expenses excludes integration, restructuring and other non-operating expenses, stock compensation expense, interest expense and policy acquisition expenses. We believe a measure like operating expenses is useful in analyzing the trends of our core business operations and profitability. While we believe operating expenses is a meaningful financial metric and enhances our understanding of the underlying profitability drivers of our business, it should not be used as a substitute for policy and other operating expenses presented under GAAP.

In managing our business we analyze invested assets, which does not correspond to total investments, including investments in related parties, as disclosed in our consolidated financial statements and notes thereto. Invested assets represents the investments that directly back our reserve liabilities as well as surplus assets. Invested assets is used in the computation of net investment earned rate, which allows us to analyze the profitability of our investment portfolio. Invested assets includes (a) total investments on the consolidated balance sheets with AFS securities at cost or amortized cost, excluding derivatives, (b) cash and cash equivalents and restricted cash, (c) investments in related parties, (d) accrued investment income, (e) the consolidated VIE assets, liabilities and noncontrolling interest, (f) net investment payables and receivables and (g) policy loans ceded (which offset the direct policy loans in total investments). Invested assets also excludes assets associated with funds withheld liabilities related to business exited through reinsurance agreements and derivative collateral (offsetting the related cash positions). We include the underlying investments supporting our assumed funds withheld and modco agreements in our invested assets calculation in order to match the assets with the income received. We believe the adjustments for reinsurance provide a view of the assets for which we have economic exposure. Our invested assets are averaged over the number of quarters in the relevant period to compute our net investment earned rate for such period.

Sales statistics do not correspond to revenues under GAAP but are used as relevant measures to understand our business performance as it relates to deposits generated during a specific period of time. Our sales statistics include deposits for fixed rate annuities and FIAs and align with the LIMRA definition of all money paid into an individual annuity, including money paid into new contracts with initial purchase occurring in the specified period and existing contracts with initial purchase occurring prior to the specified period (excluding internal transfers).

Safe Harbor for Forward-Looking Statements

This press release contains, and certain oral statements made by Athene's representatives from time to time may contain, forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995, Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. Such statements are subject to risks and uncertainties that could cause actual results, events and developments to differ materially from those set forth in, or implied by, such statements. These statements are based on the beliefs and assumptions of Athene's management and the management of Athene's subsidiaries. Generally, forward-looking statements include actions, events, results, strategies and expectations and are often identifiable by use of the words "believes," "expects," "intends," "anticipates," "plans," "seeks," "estimates," "projects," "may," "will," "could," "might," or "continues" or similar expressions. Forward-looking statements within this press release include, but are not limited to, discussions related to the issuance and exchange of common equity interests of Athene and Apollo and the results to be derived therefrom; amendments to the bye-laws of Athene to eliminate its multi-class share structure; potential inclusion of Athene's common shares in certain specified indices, the ACRA capital raise and the benefits to be derived therefrom, the future outcome of Athene's capital allocation determinations, and future financial performance. Factors that could cause actual results, events and developments to differ include, without limitation: Athene's and/or Apollo's failure to obtain approval of the transaction by its shareholders or regulators: Athene's failure to recognize the benefits expected to be derived from the transaction with Apollo; unexpected difficulties or expenditures related to the transaction with Apollo; disruption of Athene's current plans, operations and relationships with policyholders, reinsurance counterparties or other business partners caused by the announcement and pendency of the transaction with Apollo; legal proceedings, including those that may be instituted against Athene, Athene's board of directors, Athene's executive officers and others following announcement of the transaction with Apollo; failure to close the ACRA capital raise or failure to achieve the benefits expected to be derived therefrom; the accuracy of Athene's assumptions and estimates; Athene's ability to maintain or improve financial strength ratings; Athene's ability to manage its business in a highly regulated industry; regulatory changes or actions; the impact of Athene's reinsurers failing to meet their assumed obligations; the impact of interest rate fluctuations; changes in the federal income tax laws and regulations; the accuracy of Athene's interpretation of the Tax Cuts and Jobs Act, litigation (including class action litigation), enforcement investigations or regulatory scrutiny; the performance of third parties; the loss of key personnel; telecommunication, information technology and other operational systems failures; the continued availability of capital; new accounting rules or changes to existing accounting rules; general economic conditions; Athene's ability to protect our intellectual property: the ability to maintain or obtain approval of the Delaware Department of Insurance, the Iowa Insurance Division and other regulatory authorities as required for our operations; and other factors discussed from time to time in Athene's filings with the SEC, including its annual report on Form 10-K for the year ended December 31, 2018, its quarterly report on Form 10-Q for the quarterly period ended June 30, 2019 and its other SEC filings, which can be found at the SEC's website www.sec.gov.

All forward-looking statements described herein are qualified by these cautionary statements and there can be no assurance that the actual results, events or developments referenced herein will occur or be realized. Athene does not undertake any obligation to update or revise forward-looking statements to reflect changed assumptions, the occurrence of unanticipated events or changes to future operating results.

1 Investment funds, including related parties and investment funds of consolidated VIE's, is the GAAP measure which does not include investments that we view as alternative investments. Alternative investments include CLO equity tranche securities that are included in trading securities in the GAAP view, another deemail preferred stock viewed as an alternative investment for management view but included in equity securities for GAAP view, investment funds included in our funds withheid at interest reinsurance portfolios, net assets of VIE's other than investment funds as well as royalities and other investments. Please refer to Notes to the Financial Supplement section for discussion on invested assets including alternative investments and the Non-GAAP Measure Reconciliations section for the reconciliation of investment funds to alternative investments.

1 Alternative investments does not correspond to the total investment funds, including related parties and VIEs, on our condensed consolidated balance sheets. Alternative investments adjusts the GAAP presentation to include CLO equity tranche securities that are included in trading securities in the GAAP view, a nonredeemable preferred stock viewed as an alternative investment for management view but included in equity securities for GAAP view, investment funds included in our funds withheld at interest reinsurance portfolios, net assets of VIEs other than investment funds, as well as royalties and other investments. Please refer to Notes to the Financial Supplement section for discussion on invested assets including alternative investments and the Non-GAAP Measure Reconciliations section for the reconciliation of investment funds, including related parties and VIEs to alternative investments.

1 Funds withheld at interest represents a receivable for amounts contractually withheld by ceding companies in accordance with modco and funds withheld reinsurance agreements in which we act as the reinsurer. In managing our business we utilize invested assets, where we adjust the presentation for funds withheld and modco transactions to include or exclude the underlying investments based upon the contractual transfer of economic exposure to such underlying investments.

Total NAIC 1 & 2 Designations

1 Securities denoted as non-rated by the NRSRO were classified as investment or non-investment grade according to the security's respective NAIC designation. With respect to loan-backed and structured securities, the NAIC designation methodology differs in significant respects from the NRSRO rating methodology. 2 We view the NAIC designation methodology as the most appropriate way to view our AFS portfolio when evaluating credit risk since a large portion of our holdings were purchased at a significant discount to par. With respect to loan-backed and structured securities, the NAIC designation methodology differs in significant respects from the NRSRO rating methodology is focused on the likelihood of recovery of all contractual payments, including principal at par regardless of entry price, while the NAIC designation addology considers our investment at amortized cost, and the likelihood of recovery of that book value as opposed to the likelihood of the recovery of all contractual payments. Selection of the Financial Supplement section for discussion on invested assets and Non-GAAP Measure Reconciliations section for the reconciliation of total investments including related parties to invested assets.

1 Please refer to Notes to the Financial Supplement section for discussion on invested assets and Non-GAAP Measure Reconciliations section for the reconciliation of total investments including related parties to invested assets. 2 NAIC and NRSRO designations include corporates, CLO, RMBS, CMBS, CMBS, State, municipal, political subdivisions and foreign government securities, short-term investments and U.S. government and agencies securities. 3 Securities denoted as non-rated by the NRSRO were classified as investment or non-investment grade according to the security's respective NAIC designation. With respect to loan-backed and structured securities, the NAIC designation methodology differs in significant respects from the NRSRO rating methodology. 4 Other includes policy loans, accrued interest, and other invested assets.

1 Basic earnings per common share, including basic weighted average common shares outstanding, includes all classes eligible to participate in dividends for each period presented. 2 Diluted earnings per common share on a GAAP basis for Class A common shares, including diluted Class A weighted average common shares outstanding, includes the dilutive impacts, if any, of Class B common shares. Class M common shares and any other stock-based awards. 3 Represents Class A common shares outstanding items that are able to be converted to or settled in Class A common shares, including the impacts of Class B common shares and any other stock-based awards. 3 Represents Class M common shares and any other stock-based awards. The excluding the impacts of Class B common shares and any other stock-based awards, but excluding the impacts of Class B common shares or settled in Class A common shares on the applicable measurement date. 4 Represents common shares vested and outstanding for all classes eligible to participate in dividends for each period presented.

Notes to the Financial Supplement

In addition to our results presented in accordance with GAAP, we present certain financial information that includes non-GAAP measures. Management believes the use of these non-GAAP measures, together with the relevant GAAP measures, provides information that may enhance an investor's understanding of our results of operations and the underlying profitability drivers of our business. The majority of these non-GAAP measures are intended to remove from the results of operations the impact of market volatility other than with respect to alternative investments) as well as integration, restructuring and certain other expenses which are not part of our underlying profitability drivers, as such them fulctuate from period to period in a manner inconsistent with these drivers. These measures should be considered supplementary to our results in accordance with GAAP and should not be viewed as a substitute for the corresponding GAAP measures. See *Non-GAAP Measure Reconciliations* for the appropriate reconciliations

ADJUSTED OPERATING INCOME AVAILABLE TO COMMON SHAREHOLDERS AND ADJUSTED OPERATING RETURN ON ASSETS (ROA)

Adjusted operating income available to common shareholders is a non-GAAP measure used to evaluate our financial performance excluding market volatility and expenses related to integration, restructuring, stock compensation and other expenses. Our adjusted operating income available to common shareholders equals net income available to AHL common shareholders adjusted to eliminate the impact of the following (collectively, the "non-operating adjustments"):

- Investment Gains (Losses), Net of Offsets—Investment gains (losses), net of offsets, consist of the realized gains and losses on the sale of AFS securities, the change in fair value of reinsurance assets, unrealized gains and losses, impairments, and other investment gains and losses are comprised of the fair value adjustments of trading securities (other than CLOs) and investments held under the fair value option, derivative gains and losses are comprised of the fair value adjustments of trading securities (other than CLOs) and investments held under the fair value option, derivative gains and losses are comprised of the fair value adjustments of trading securities (other than CLOs) and investments held under the fair value option, derivative gains and losses are to offsets related to DAC, DSI, and VOBA anortization and changes to guaranteed lifetime withdrawal benefit (GLWB) and guaranteed minimum death benefit (GMDB) reserves represent rider reserves) as well as the MVAs associated with surrenders or terminations of contracts.
 Change in Fair Values of Derivatives and Embedded Derivatives FIAS, Net of Offsets—Integrates related to DAC, DSI, and VOBA anortization and changes to guaranteed lifetime withdrawal benefit (GLWB) and guaranteed minimum death benefit (GAUB) reserves represent rider reserves) as well as the MVAs associated with surenders or terminations of contracts.
 Change in Fair Values of Derivatives and Embedded Derivatives FIAS, Net of Offsets—Integrates related to DAC, DSI, and VOBA anortization and changes to guaranteed infibure withdrawal benefit (GLWB) and guaranteed minimum death benefit (GLWB) are graves and Embedded Derivatives are purchased to a dual periods beyond the current period reserves related to DAC, DSI and UGAC realities and the related embedded derivative liability fluctuations from period to period. The index reserves is measured at fair val
- Change in Fair Values of Derivatives and Embedded Derivatives FIAs, Net of Offsets—Impacts related to the fair value accounting for derivatives hedging the FIA index credits and the related embedded derivative liability fluctuations from period to period. The index reserve is measured at fair value for the current period and all periods beyond the current policyholder index term. However, the FIA hedging derivatives are purchased to hedge only the current index period. Upon policyholder renewal at the end of the period, mey FIA hedging derivatives are purchased to align with the new term. The difference in duration between the FIA hedging derivatives and index credit reserves creates a timing difference of the FIA hedging derivatives and index credit reserves reserves is included as a non-operating adjustment, net of offsets related to DAC, DSI, and VOBA amortization and changes to rider reserves. We primarily hedge with options that align with the index credit is outperiod, there is a duration mismatch which may lead to mismatches for accounts are credited with index performance at the end of each index term. However, because the 'value of an embedded derivative' in an FIA contract is longer-dated, there is a duration mismatch wich may lead to mismatches for accounting purposes.
 Integration, Restructuring, and Other Non-operating Expenses—Integration, restructuring, and other non-operating expenses consist of restructuring and integration expenses related to acquisitions and block reinsurance costs as well as certain derivative.
- Integration, Restructuring, and Other Non-operating Expenses—Integration, restructuring, and other non-operating expenses consist of restructuring and integration expenses related to acquisitions and block reinsurance costs as well as certain
 other expenses which are not predictable or related to our underlying profilability drivers.
 Stock Compensation Expense—Stock compensation expenses associated with our share incentive plans, excluding our long-term incentive plan, are not related to our underlying profitability drivers and fluctuate from time to time due to the structure of
- Stock Compensation Expense—Stock compensation expenses associated with our share incentive plans, excluding our long-term incentive plan, are not related to our underlying profitability drivers and fluctuate from time to time due to the structure of
 our plans.
- Bargain Purchase Gain—Bargain purchase gains associated with acquisitions are adjustments to net income available to AHL common shareholders as they are not related to our underlying profitability drivers.
 Income Tax (Expense) Benefit Non-operating—The non-operating income tax expense represents the income tax effect of non-operating adjustments and is computed by applying the appropriate jurisdiction's tax rate to the non-operating adjustments that are subject to income tax.

We consider these non-operating adjustments to be meaningful adjustments to net income available to AHL common shareholders for the reasons discussed in greater detail above. Accordingly, we believe using a measure which excludes the impact of these items is useful in analyzing our business performance and the trends in our results of operations. Together with net income available to AHL common shareholders, we believe adjusted operating income available to common shareholders in the useful is useful in westors understand our underlying results and profitability. Adjusted operating income available to AHL common shareholders should not be used as a substitute for net income available to AHL common shareholders.

Adjusted operating ROA is a non-GAAP measure used to evaluate our financial performance and profitability. Adjusted operating ROA is computed using our adjusted operating income available to common shareholders divided by average invested assets for the relevant period. To enhance the ability to analyze these measures across periods, interim periods are annualized. While we believe each of these metrics are meaningful financial metrics and enhance our understanding of the underlying profitability drivers of our business, they should not be used as a substitute for ROA presented under GAAP.

ADJUSTED OPERATING ROE

Adjusted operating ROE is a non-GAAP measure used to evaluate our financial performance excluding the impacts of AOCI and the cumulative change in fair value of funds withheld and modoo reinsurance assets, in each case net of DAC, DSI, rider reserve and tax offsets. Adjusted operating ROE is a non-GAAP measure used to evaluate our financial performance excluding AOCI, the cumulative change in fair value of funds withheld and modoo reinsurance assets, in each case net of DAC, DSI, rider reserve and tax offsets. Adjusted operating income available to common shareholders' equity is calculated as the ending shareholders' equity excluding AOCI, the cumulative change in fair value of funds withheld and modoo reinsurance assets and preferred stock. Adjusted operating ROE is calculated as the ending shareholders' equity. These adjustements fluctuate period to period in a manner inconsistent with our underlying profitability drivers as the majority of such fluctuation is related to the market volatility of the unrealized gains and losses associated with our AFS securities. Except with respect to reinvestment activity relating to acquired blocks of businesses, we typically buy and hold AFS investments to maturity throughout the duration of market fluctuations, therefore, the period-over-period impacts in unrealized gains and losses are not necessarily indicative of current operating flundamentals or future performance. Accordingly, we believe using measures which exclude AOCI and the cumulative change in fair value of funds withheld and modor reinsurance assets are useful in analyzing trends in our operating flundamentals or future performance. Accordingly, we believe using measures which exclude AOCI and the cumulative change in fair value of funds withheld and modor reinsurance assets are useful in analyzing trends in our operating flundamentals or future performance. Accordingly, use an annuelized. Adjusted operating ROE is accurate the ability to analyze these measures across periods, interim periods are annualized.

ADJUSTED OPERATING EARNINGS PER COMMON SHARE, WEIGHTED AVERAGE COMMON SHARES OUTSTANDING - ADJUSTED OPERATING, AND ADJUSTED BOOK VALUE PER COMMON SHARE

Adjusted operating earnings per common share, weighted average common shares outstanding – adjusted operating and adjusted book value per common share are non-GAAP measures used to evaluate our financial performance and financial condition. The non-GAAP measures adjust the number of shares included in the corresponding GAAP measures to reflect the conversion or settlement of all shares and other stock-based awards outstanding. We believe using these measures represents an economic view of our share counts and provides a simplified and consistent view of our outstanding shares. Adjusted operating earnings per common share is calculated as the adjusted operating common shares is calculated as the adjusted operating common shares and ther stock-based awards outstanding. We believe using these measures represents an economic view of our share counts and provides a simplified and consistent view of our outstanding shares. Adjusted operating earnings per common share is calculated as the adjusted doment view of our outstanding of the adjusted operating common shares are connomically functions as options as they are convertible into Class A common shares and na powent of the conversion price. In calculatided earnings per share on a of-for-one basis, at any time. Our Class M common shares are required to apply sequencing rules to determine the dilutive impacts, if any, of our class B common shares, Class M common shares and or any other stock-based awards. To the extent our Class B common shares outstanding assume conversion price and any other stock-based awards are not all usclustion of the conversion price basis, the impacts of all Class M common shares not of the conversion price and any other stock-based awards are able to be conversion or settlement of all outstanding items that are able to be conversion price exceeds the market value of our Class A common shares on a on-for-one basis, the market value of our Class M common shares not of the conversion price and any other stock-based awards are not all outstandin

Notes to the Financial Supplement

ADJUSTED DEBT TO CAPITAL RATIO

Adjusted debt to capital ratio is a non-GAAP measure used to evaluate our capital structure excluding the impacts of AOCI and the cumulative change in fair value of funds withheld and modco reinsurance assets, net of DAC, DSI, rider reserve and tax offsets Adjusted debt to capital ratio is calculated as total debt excluding consolidated variable interest entities (VIEs) divided by adjusted shareholders' equity. Adjusted debt to capital ratio should not be used as a substitute for the debt to capital ratio. However, we believe the adjustments to total debt and shareholders' equity are significant to gaining an understanding of our capitalization, debt utilization and debt capacity.

RETIREMENT SERVICES NET INVESTMENT SPREAD, INVESTMENT MARGIN ON DEFERRED ANNUITIES, AND OPERATING EXPENSES

Net investment spread is a key measurement of the financial health of our Retirement Services profitability. Net investment spread measures our investment performance less the total cost of our liabilities. Net investment earned rate is a key measure of our investment performance, while cost of funds is a key measure of the cost of our policyholder benefits and liabilities. Investment margin on our deferred annuities measures our investment performance less the cost of crediting for our deferred annuities, which make up a significant portion of our reserve liabilities

- Net investment earned rate is a non-GAAP measure we use to evaluate the performance of our invested assets that does not correspond to GAAP net investment income. Net investment earned rate is computed as the income from our invested assets divided by the average invested assets for the relevant period. To enhance the ability to analyze these measures across periods, interim periods are annualized. The adjustments to arrive at our net investment earned rate add alternative investment gains and losses, gains and losses related to trading securities for CLOs, net VIE impacts (revenues, expenses and noncontrolling interest) and the change in fair value of reinsurance assets. We include the income and assets supporting our change in fair value of reinsurance assets by evaluating the underlying investments of the funds withheld at interest receivables and we include the net investment income from those underlying investments which does not correspond to the GAAP presentation of change in fair value of reinsurance assets. We exclude the income and assets supporting business that we have exited through ceded reinsurance including funds withheld agreements. We believe the adjustments for reinsurance provide a net investment earned rate on the assets for which we have economic exposure.
- Cost of funds includes liability costs related to cost of crediting on both deferred annuities and institutional products as well as other liability costs. Cost of funds is computed as the total liability costs divided by the average invested assets for the relevant period. To enhance the ability to analyze these measures across periods, interim periods are annualized.
 - Cost of crediting includes the costs for both deferred annuities and institutional products. Cost of crediting on deferred annuities is the interest credited to the policyholders on our fixed strategies as well as the option costs on the indexed anult strategies. With respect to FIAs, the loss of providing index credits includes the expenses incurred to fund the annult strategies. With respect to FIAs, the loss of providing index credits includes the expenses incurred to fund the annult index credits. and where applicable, minimum guaranteed interest credited. Cost of crediting on the interest and the interest applicable is comprised of PRT costs including interest credited, benefit payments and other reserve changes, net of premiums received when issued, as well as funding agreement costs including the interest pay and other reserve changes. Cost of crediting on deferred annulties is computed as the interest credited on fixed strategies and option costs on indexed annulties is computed as the interest credited on fixed strategies and option costs on indexed annulti strategies divided by the average account value of our deferred annulties. Cost of crediting on institutional products indexed annulties is computed as the interest credited on fixed strategies and option costs on indexed annulti strategies divided by the average account value of our deferred annulties. Cost of crediting on institutional products indexed annulties is computed as the interest credited on fixed strategies and option costs on indexed annulty strategies divided by the average account value of our deferred annulties. Cost of crediting on institutional products indexed annulties are account value of our deferred annulties. computed as the PRT and funding agreement costs divided by the average institutional reserve liabilities. Our average invested assets, account values and institutional reserve liabilities are averaged over the number of guarters
 - in the relevant priod to obtain our associated cost of crediting for such period. To enhance the ability to analyze these measures across periods, interim periods are annualized. Other liability costs include DAC, DSI and VOBA amortization, change in rider reserves, the cost of liabilities on products other than deferred annuities and institutional products, excise taxes, premiums, product charges and other revenues. We believe a measure like other liability costs is useful in analyzing the trends of our core business operations and profitability. While we believe other liability costs is a meaningful financial metric and enhances our understanding of the underlying profitability drivers of our business, it should not be used as a substitute for total benefits and expenses presented under GAAP
- Net investment earned rate, cost of funds, net investment spread and investment margin on deferred annuities are non-GAAP measures we use to evaluate the profitability of our business. We believe these metrics are useful in analyzing the trends of our business operations, profitability and pricing discipline. While we believe each of these metrics are meaningful financial metrics and enhance our understanding of the underlying profitability drivers of our business, they should not be used as a substitute for net investment income, interest sensitive contract benefits and expenses presented under GAAP.
- Operating expenses excludes integration, restructuring and other non-operating expenses, stock compensation expense, interest expense and policy acquisition expenses. We believe a measure like operating expenses is useful in analyzing the trends of our core business operations and profitability. While we believe operating expenses is a meaningful financial metric and enhances our understanding of the underlying profitability drivers of our business, it should not be used as a substitute for policy and other operating expenses presented under GAAP.

INVESTED ASSETS

In managing our business we analyze invested assets, which does not correspond to total investments, including investments in related parties, as disclosed in our consolidated financial statements and notes thereto. Invested assets represents the investments that directly back our reserve liabilities as well as surplus assets. Invested assets is used in the computation of net investment earned rate, which allows us to analyze the profitability of our investment portfolio. Invested assets includes (a) total investments on the consolidated balance sheets with AFS securities at costs, excluding derivatives, (b) cash and cash equivalents and restricted cash, (c) investments in related parties, (a) accurate investment payables and receivables and (g) policy loans ceded (which offset the direct policy loans in total investments). Invested assets also excludes assets associated with funds withheld liabilities related to business exited through reinsurance agreements and derivative collateral (offsetting the related cash positions). We include the underlying investments supporting our assumed funds withheld and modco agreements in our invested assets calculation in order to match the assets with the income received. We believe the adjustments for reinsurance provide a view of the assets for which we have economic exposure. Our invested assets are averaged over the number of quarters in the relevant period to compute our net investment earned rate for such period.

RESERVE LIABILITIES

In managing our business we also analyze reserve liabilities, which does not correspond to total liabilities as disclosed in our consolidated financial statements and notes thereto. Reserve liabilities represents our policyholder liability obligations net of reinsurance and is used to analyze the costs of our liabilities. Reserve liabilities includes (a) the interest sensitive contract liabilities, (b) future policy benefits, (c) dividends payable to policyholders, and (d) other policy claims and benefits, offset by reinsurance recoverable, excluding policy loans caded. Reserve liabilities interest sensitive contract liabilities, (b) future policy benefits, (c) dividends payable to policyholders, and (d) other policy claims and benefits, offset by reinsurance recoverable, such and policy loans caded. Reserve liabilities in the rest sensitive contract liabilities is are passed to such reinsurers and, therefore, we have not of the caded liabilities to insuring our reinsurens are passed to such reinsurers and, therefore, we have not liabilities, and related reinsuring our reinsurens are passed to such reinsurers and, therefore, we have not be caded liabilities to insuring our related reinsuring are policy benefits. For such transactions, GAAP requires the ceded liabilities and related reinsurance recoverables to continue to be recorded in our consolidated financial statements despite the transfer of economic risk to the counterparty in connection with the reinsurance transaction

SALES Sales statistics do not correspond to revenues under GAAP but are used as relevant measures to understand our business performance as it relates to deposits generated during a specific period of time. Our sales statistics include deposits for fixed rate annuities and FIAs and align with the LIMRA definition of all money paid into an individual annuity, including money paid into new contracts with initial purchase occurring in the specified period and existing contracts with initial purchase occurring in the specified period and existing contracts with initial purchase occurring period and existing contracts with initial purchase occurring prior to the specified period (excluding internal transfers).
